A very short guide to formatting HPSG with LaTeX

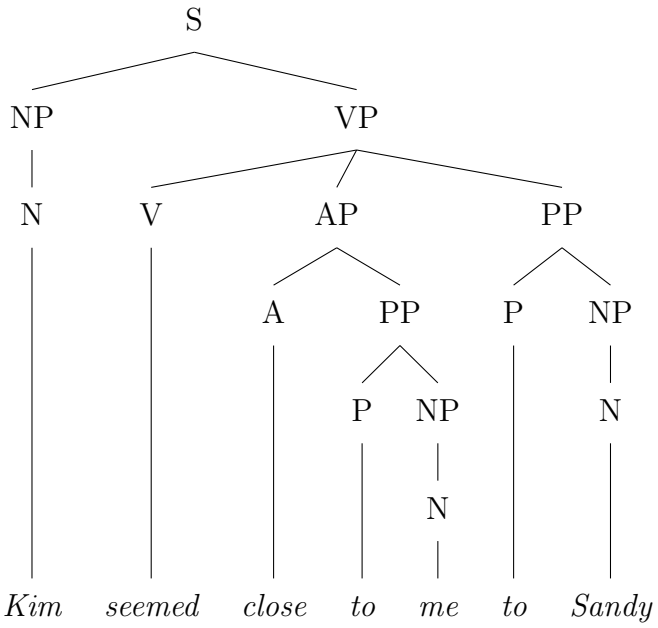

Francis Bond

February 2026

Some recommended packages, and examples of trees and feature structures. For some advice on style take a look at my *(Computational) Linguistic Style Guidelines: a guide for the flummoxed*, or the very comprehensive *Generic Style Rules for Linguistics: Abridged LangSci version*.

1 Syntactic Tree

For trees, we use forest:

You can draw the trees using brackets.

2 AVM

We use langsci-avm for feature structures (attribute value matrices).

Lexical Entry for *eat*

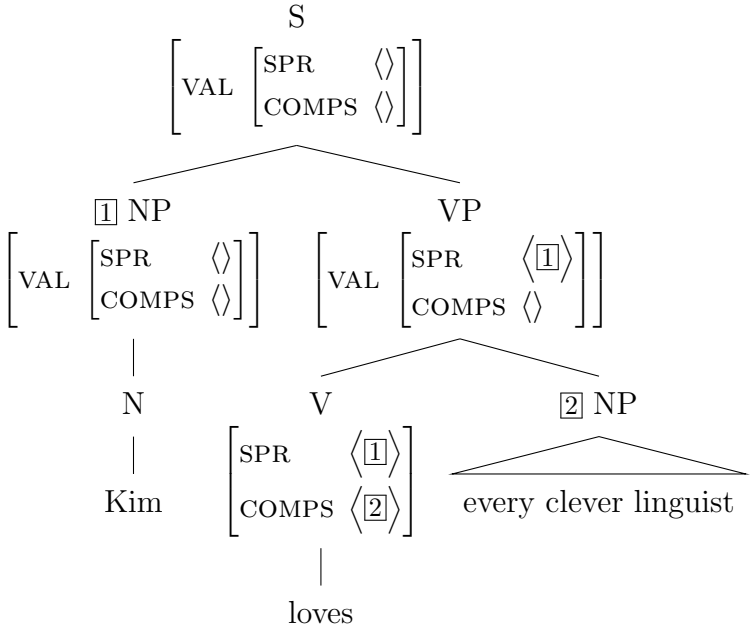

$$\left\langle \text{devour}, \begin{bmatrix} \textit{word} \\ \textsc{head} & \textit{verb} \\ \textsc{val} & \left[\textsc{comps} \left\langle \text{NP} \right\rangle\right] \end{bmatrix} \right\rangle$$

Binary Head-Complement Rule

$$\begin{bmatrix} \textit{phrase} \\ \textsc{val} & \left[\textsc{comps} \left\langle\right\rangle\right] \end{bmatrix} \rightarrow \mathbf{H} \begin{bmatrix} \textit{word} \\ \textsc{val} & \left[\textsc{comps} \left\langle \boxed{1} \right\rangle\right] \end{bmatrix} \boxed{1}$$

3 Tree and AVM

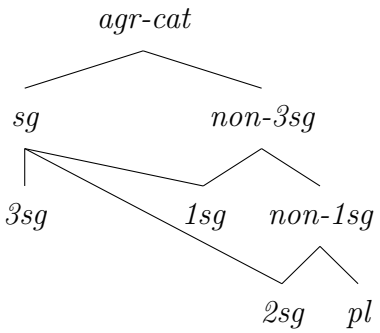

AVMs can be embedded in tree nodes:

It's easiest to build the tree first, then add the avms bit by bit, ...

4 Type Hierarchy

You can also add extra lines to trees, using the underlying package **tikz**. See the **forest** documentation for more details.

5 Numbered Examples and Glosses

I recommend using langsci-gb4e for numbered examples.

(1) An example

(2) Další příklad "Another example" (Czech)

(3) Japanese
manmosu-wa *zetumetu-shita*
mammoth-TOP die.out-did
"Mammoths died out."

(4) Another example

You can refer to an example: (2) is an informal way, only ok if you know your readers will know the languages; (3) follows the Leipzig Glossing Rules.

In your assignment, you should gloss them with the Leipzig Glossing Rules.
