# TODO: a title that names the phenomenon

KOL/MORS Morpho-Syntax

TODO: First Author's Name  TODO: Second Author's Name

2027-01-31

**Abstract**

TODO: three or four sentences. What is the phenomenon, what is puzzling about it, and what do you conclude? Write this last.

## 1 Introduction

TODO: Say what the phenomenon is and why it is interesting. "Interesting" is subjective, so argue for it: what would we expect, and what happens instead? Lead with a concrete example rather than with the literature.

Here is how you give a numbered example:

(1) The more you read, the better you write.

Refer back to it as (1) — never as "the example above".

A star marks an unacceptable example. Grouped examples share one number and get letters:

(2) a. Who did you say left?
b. * Who did you say that left?

## 2 The data

TODO: Present the examples your argument rests on. If they are not in English they must be glossed, so that a reader who does not speak the language can follow.

This is a glossed example. The source line and the gloss line must have the *same number of words*, and matching hyphens, or the columns will not line up:

(3) Czech [ces]
*Pět žen přišlo*
five women come.PST.N.SG
"Five women came."

(4) Czech [ces]
*Nikdo nic ne-řekl*
nobody nothing NEG-say.PST.M.SG
"Nobody said anything."

Three conventions, all of which we will mark:

- Cited forms go in *italics*. In a gloss the source line is italicised for you, but in running text you have to do it yourself: the word *žena*, the suffix *-ů*.
- Glosses of grammatical material go in SMALL CAPITALS; lexical material stays lower case. Follow the Leipzig Glossing Rules.
- Name the language on the first line of the example, with its ISO 639-3 code in square brackets: Czech `[ces]`, English `[eng]`, German `[deu]`. Look yours up if you are not sure.

Cite the source of any example you did not make up yourself.

# 3 Previous work

TODO: What have other people said about this? You need at least three references to the linguistic literature. Read them — do not cite a paper you have not opened.

There are two citation commands. Use `\citet` when the author is part of your sentence, and `\citep` when the citation sits in brackets at the end:

> Shieber (1985) argues that Swiss German is not context-free.
> Swiss German is not context-free (Shieber, 1985).

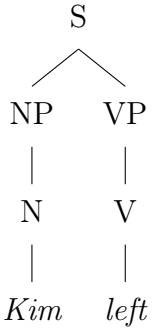

Give a page number when you point at a specific claim, like this: (Shieber, 1985, p. 337). A similar argument had already been made for Dutch (Bresnan et al., 1982).

# 4 Analysis

TODO: Then do *one* of the following.

**Either a formal analysis.** Work out part of the problem as explicitly as possible, preferably in the framework we have been using (Sag et al., 2003). You do not have to solve all of it — take a piece small enough that you can be precise about it, and say what still needs to be explained.

**some examples** Delete whichever of these you do not need. There are fuller examples, including type hierarchies and AVMs embedded in trees, in the short guide to formatting HPSG with LaTeX.

$$\begin{bmatrix} \textit{word} & \\ \textsc{head} & \textit{verb} \\ \textsc{val} & \left[\textsc{comps} \left\langle \text{NP} \right\rangle\right] \end{bmatrix}$$

**Or a survey of speakers' grammaticality judgements.** Ask at least five speakers, report how many accepted each example, and say what you asked them and how. Raw counts are fine; you are not expected to do statistics. Say clearly where your speakers came from, because it matters for what the numbers mean.

# 5 Conclusion

TODO: What did you find? Link back to the puzzle you opened with. End with what you showed, and possibly some ides for future work.

## Contribution statement

TODO: Say who did what. A couple of sentences is enough, for example: "A. collected and glossed the data and wrote Sections 2 and 4; B. did the literature review and wrote Sections 1 and 3; both authors revised the whole paper."
